

Link: <https://github.com/ChunhBi/ChunhaoBi-Calculator>

Reminder:

1. The math is calculated just like the function. Multiplication and division are calculated first.
2. The sqrt function will immediately calculate and remove the function and display its square root result.
3. Division by 0 and square root of negative number will result in Infinity and NAN respectively, and also raise an snackbar of warning.
4. Any unfinished part of function will not be calculated, like $1+3- = 4$, $1+3-9 = -5$, $1+3-9* = 4$

Demo:
